

Exercise- Data Visualization

- Iris Species Dataset: <https://www.kaggle.com/datasets/uciml/iris/data>
-

1. Create a **figure with two subplots side by side**:

- **Left subplot:**
 - Plot a **scatter plot** of sepal_length vs sepal_width.
 - Use **different colors** for each species.
 - Add a legend with species names.
 - Set custom x-ticks and rotate them.
- **Right subplot:**
 - Plot a **histogram** of petal_length (different colors for species).
 - Add labels, title, and legend.

2. Customize both plots:

- Add **titles**, x/y-axis labels.
- Use `ax.set_xticks()`, `ax.set_xticklabels(rotation=45, fontsize=10)`.
- Use `fig.subplots_adjust(wspace=0.3)` to control spacing.

3. Save the figure as "**iris_visualization.png**" with dpi=300.
